

Based on plants

WHY GREENFIRST®?

Greenfirst® contains extracts of lemon, lavender and eucalyptus essential oils. Vegetable Geraniol, extracted from plants, is the active substance which gives Greenfirst® its outstanding performance against dust-mites.

The house dust mite is the most common allergen encountered in New Zealand and most other developed countries. It is the major cause of allergies in persons with year-round complaints of stuffy nose, sneezing and watery eyes — what some people describe as a “permanent cold”. In addition to these allergic reactions, dust-mites can trigger asthma and eczema.

Registered with Oeko-Tex Standard 100, all classes, Greenfirst® is the only anti dust-mites treatment on the market which is both plant-based, Oeko-Tex and free of chemical microcapsules. It contains neither traditional pesticides nor benzimidazoles nor chemical solvents.

Treatment against mites stays effective even after 30 domestic washing cycles at 60°C (cotton). The effectiveness of Greenfirst® is regularly confirmed by the independent laboratory TEC (Techniques Environment Consultants).

GREENFIRST® IS EXCLUSIVE TO BRISCOES IN NEW ZEALAND
